# Rules on letting this property

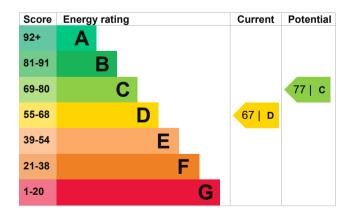

Properties can be rented if they have an energy rating from A to E.

If the property is rated F or G, it cannot be let, unless an exemption has been registered. You can read guidance for landlords on the regulations and exemptions (https://www.gov.uk/guidance/domestic-private-rented-property-minimum-energy-efficiency-standard-landlord-guidance).

# Energy efficiency rating for this property

This property's current energy rating is D. It has the potential to be C.

<u>See how to improve this property's energy</u> performance.

The graph shows this property's current and potential energy efficiency.

Properties are given a rating from A (most efficient) to G (least efficient).

Properties are also given a score. The higher the number the lower your fuel bills are likely to be.

For properties in England and Wales:

the average energy rating is D the average energy score is 60

# Breakdown of property's energy performance

This section shows the energy performance for features of this property. The assessment does not consider the condition of a feature and how well it is working.

Each feature is assessed as one of the following:

- very good (most efficient)
- good
- average
- poor
- very poor (least efficient)

When the description says "assumed", it means that the feature could not be inspected and an assumption has been made based on the property's age and type.

| Feature              | Description                                    | Rating    |
|----------------------|--|-----------|
| Wall                 | Cavity wall, as built, no insulation (assumed) | Poor      |
| Roof                 | Pitched, no insulation (assumed)               | Very poor |
| Window               | Fully double glazed                            | Good      |
| Main heating         | Boiler and radiators, mains gas                | Good      |
| Main heating control | Programmer, no room thermostat                 | Very poor |
| Hot water            | From main system                               | Very good |
| Lighting             | Low energy lighting in 38% of fixed outlets    | Average   |
| Floor                | Solid, no insulation (assumed)                 | N/A       |
| Secondary heating    | None   | N/A       |

### Primary energy use

The primary energy use for this property per year is 257 kilowatt hours per square metre (kWh/m2).

## Additional information

Additional information about this property:

• Cavity fill is recommended

| Environmental impac property   | t of this       | This property produces  | 2.3 tonnes of CO2 |
|--|-----------------|---|-------------------|
| This property's current enviror rating is D. It has the potential                                |                 | This property's potential production  | 1.5 tonnes of CO2 |
| Properties are rated in a scale from A to G based on how much carbon dioxide (CO2) they produce. |                 | By making the <u>recommended changes</u> , you<br>could reduce this property's CO2 emissions by<br>0.8 tonnes per year. This will help to protect the<br>environment. |                   |
| Properties with an A rating pro  | oduce less CO2  | environment.  |                   |
| than G rated properties.   |                 | Environmental impact rating assumptions about average   |                   |
| An average household<br>produces   | 6 tonnes of CO2 | energy use. They may not reflect how energy is consumed by the people living at the property.   |                   |

# How to improve this property's energy performance

Making any of the recommended changes will improve this property's energy efficiency.

If you make all of the recommended changes, this will improve the property's energy rating and score from D (67) to C (77).

| Recommendation                                 | Typical installation cost | Typical yearly saving |
|--|---------------------------|-----------------------|
| 1. Flat roof or sloping ceiling insulation     | £850 - £1,500             | £29                   |
| 2. Cavity wall insulation                      | £500 - £1,500             | £60                   |
| 3. Floor insulation (solid floor)              | £4,000 - £6,000           | £28                   |
| 4. Low energy lighting                         | £25                       | £22                   |
| 5. Heating controls (room thermostat and TRVs) | £350 - £450               | £34                   |

### Paying for energy improvements

Find energy grants and ways to save energy in your home. (https://www.gov.uk/improve-energy-efficiency)

# Estimated energy use and potential savings

| Estimated yearly energy<br>cost for this property | £557 |
|---|------|
| Potential saving                                  | £175 |

The estimated cost shows how much the average household would spend in this property for heating, lighting and hot water. It is not based on how energy is used by the people living at the property.

The estimated saving is based on making all of the recommendations in <u>how to improve this</u> <u>property's energy performance</u>.

For advice on how to reduce your energy bills visit <u>Simple Energy Advice</u> (<u>https://www.simpleenergyadvice.org.uk/</u>).

## Heating use in this property

Heating a property usually makes up the majority of energy costs.

| Estimated energy us  | ed to heat this property                        |
|----------------------|---|
| Space heating        | 6043 kWh per year                               |
| Water heating        | 2073 kWh per year                               |
| Deterrited an ensure |   |
| insulation           | savings by installing                           |
| insulation           | savings by installing<br>Amount of energy saved |
| 0,                   | Amount of energy saved                          |

of the payments.

## Contacting the assessor and accreditation scheme

This EPC was created by a qualified energy assessor.

If you are unhappy about your property's energy assessment or certificate, you can complain to the assessor directly.

If you are still unhappy after contacting the assessor, you should contact the assessor's accreditation scheme.

Accreditation schemes are appointed by the government to ensure that assessors are qualified to carry out EPC assessments.
