You might be able to receive Renewable Heat Incentive payments. This will

help to reduce carbon emissions by replacing your existing heating system

with one that generates renewable heat. The estimated energy required for

space and water heating will form the basis of the payments.

The graph shows this property's current and potential energy efficiency. Properties are given a rating from A (most efficient) to G (least efficient). Properties are also given a score. The higher the number the lower your fuel bills are likely to be. For properties in England and Wales: • the average energy rating is D • the average energy score is 60

assessment does not consider the condition of a feature and how well it is working.

This section shows the energy performance for features of this property. The

Breakdown of property's energy

Each feature is assessed as one of the following:

(assumed)

From main system

very good (most efficient)
