

# Energy performance certificate (EPC)

Mill Bank  
Kirkby Lonsdale  
CARNFORTH  
LA6 2DG

Energy rating

D

Valid until: 21 May 2033

Certificate number: 8137-3925-9200-0021-6296

Property type

Detached house

Total floor area

220 square metres

## Rules on letting this property

Properties can be let if they have an energy rating from A to E.

You can read [guidance for landlords on the regulations and exemptions](https://www.gov.uk/guidance/domestic-private-rented-property-minimum-energy-efficiency-standard-landlord-guidance) (<https://www.gov.uk/guidance/domestic-private-rented-property-minimum-energy-efficiency-standard-landlord-guidance>).

## Energy rating and score

This property's current energy rating is D. It has the potential to be C.

[See how to improve this property's energy efficiency.](#)

| Score | Energy rating | Current | Potential |
|-------|---------------|---------|-----------|
| 92+   | A             |         |           |
| 81-91 | B             |         |           |
| 69-80 | C             |         | 70 C      |
| 55-68 | D             | 57 D    |           |
| 39-54 | E             |         |           |
| 21-38 | F             |         |           |
| 1-20  | G             |         |           |

The graph shows this property's current and potential energy rating.

**Properties get a rating from A (best) to G (worst) and a score.** The better the rating and score, the lower your energy bills are likely to be.

For properties in England and Wales:

the average energy rating is D  
the average energy score is 60

# Breakdown of property's energy performance

## Features in this property

Features get a rating from very good to very poor, based on how energy efficient they are. Ratings are not based on how well features work or their condition.

Assumed ratings are based on the property's age and type. They are used for features the assessor could not inspect.

| Feature              | Description                                | Rating    |
|----------------------|--------------------------------------------|-----------|
| Wall                 | Cavity wall, as built, insulated (assumed) | Good      |
| Roof                 | Pitched, 250 mm loft insulation            | Good      |
| Roof                 | Roof room(s), insulated (assumed)          | Good      |
| Window               | Fully double glazed                        | Average   |
| Main heating         | Boiler and radiators, oil                  | Average   |
| Main heating control | Programmer, room thermostat and TRVs       | Good      |
| Hot water            | From main system, no cylinder thermostat   | Poor      |
| Lighting             | Low energy lighting in all fixed outlets   | Very good |
| Floor                | Solid, no insulation (assumed)             | N/A       |
| Secondary heating    | Room heaters, dual fuel (mineral and wood) | N/A       |

## Primary energy use

The primary energy use for this property per year is 188 kilowatt hours per square metre (kWh/m2).

## Environmental impact of this property

This property's current environmental impact rating is E. It has the potential to be D.

Properties get a rating from A (best) to G (worst) on how much carbon dioxide (CO2) they produce each year. CO2 harms the environment.

|                               |                 |
|-------------------------------|-----------------|
| An average household produces | 6 tonnes of CO2 |
|-------------------------------|-----------------|

|                        |                    |
|------------------------|--------------------|
| This property produces | 11.0 tonnes of CO2 |
|------------------------|--------------------|

|                                      |                   |
|--------------------------------------|-------------------|
| This property's potential production | 7.9 tonnes of CO2 |
|--------------------------------------|-------------------|

You could improve this property's CO2 emissions by making the suggested changes. This will help to protect the environment.

Environmental impact ratings are based on assumptions about average occupancy and energy use. They may not reflect how energy is consumed by the people living at the property.

## Changes you could make

| Step                              | Typical installation cost | Typical yearly saving |
|-----------------------------------|---------------------------|-----------------------|
| 1. Floor insulation (solid floor) | £4,000 - £6,000           | £303                  |
| 2. Hot water cylinder thermostat  | £200 - £400               | £169                  |

| Step                         | Typical installation cost | Typical yearly saving |
|------------------------------|---------------------------|-----------------------|
| 3. Solar water heating       | £4,000 - £6,000           | £99                   |
| 4. Solar photovoltaic panels | £3,500 - £5,500           | £639                  |

## Paying for energy improvements

You might be able to get a grant from the [Boiler Upgrade Scheme \(https://www.gov.uk/apply-boiler-upgrade-scheme\)](https://www.gov.uk/apply-boiler-upgrade-scheme). This will help you buy a more efficient, low carbon heating system for this property.

## Estimated energy use and potential savings

Based on average energy costs when this EPC was created:

|                                                |       |
|------------------------------------------------|-------|
| Estimated yearly energy cost for this property | £3526 |
|------------------------------------------------|-------|

|                                                      |      |
|------------------------------------------------------|------|
| Potential saving if you complete every step in order | £572 |
|------------------------------------------------------|------|

The estimated cost shows how much the average household would spend in this property for heating, lighting and hot water. It is not based on how energy is used by the people living at the property.

## Heating use in this property

Heating a property usually makes up the majority of energy costs.

## Estimated energy used to heat this property

| Type of heating | Estimated energy used |
|-----------------|-----------------------|
|-----------------|-----------------------|

|               |                    |
|---------------|--------------------|
| Space heating | 25962 kWh per year |
|---------------|--------------------|

|               |                   |
|---------------|-------------------|
| Water heating | 3563 kWh per year |
|---------------|-------------------|

## Potential energy savings by installing insulation

| Type of insulation | Amount of energy saved |
|--------------------|------------------------|
|--------------------|------------------------|

|                 |                  |
|-----------------|------------------|
| Loft insulation | 130 kWh per year |
|-----------------|------------------|

## Saving energy in this property

Find ways to save energy in your home by visiting [www.gov.uk/improve-energy-efficiency](https://www.gov.uk/improve-energy-efficiency).

## Contacting the assessor and accreditation scheme

This EPC was created by a qualified energy assessor.

If you are unhappy about your property's energy assessment or certificate, you can complain to the assessor directly.

If you are still unhappy after contacting the assessor, you should contact the assessor's accreditation scheme.

Accreditation schemes are appointed by the government to ensure that assessors are qualified to carry out EPC assessments.
