

# Energy performance certificate (EPC)

|                                      |                           |                     |                          |
|--------------------------------------|---------------------------|---------------------|--------------------------|
| 5 Parkside Road<br>KENDAL<br>LA9 7DU | Energy rating<br><b>E</b> | Valid until:        | 26 June 2035             |
|                                      |                           | Certificate number: | 2669-3052-6206-3235-1200 |

|                  |                   |
|------------------|-------------------|
| Property type    | Mid-terrace house |
| Total floor area | 215 square metres |

## Rules on letting this property

Properties can be let if they have an energy rating from A to E.

You can read [guidance for landlords on the regulations and exemptions \(https://www.gov.uk/guidance/domestic-private-rented-property-minimum-energy-efficiency-standard-landlord-guidance\)](https://www.gov.uk/guidance/domestic-private-rented-property-minimum-energy-efficiency-standard-landlord-guidance).

## Energy rating and score

This property’s energy rating is E. It has the potential to be D.

[See how to improve this property’s energy efficiency.](#)

The graph shows this property’s current and potential energy rating.

Properties get a rating from A (best) to G (worst) and a score. The better the rating and score, the lower your energy bills are likely to be.

For properties in England and Wales:

- the average energy rating is D
- the average energy score is 60

# Breakdown of property’s energy performance

## Features in this property

Features get a rating from very good to very poor, based on how energy efficient they are. Ratings are not based on how well features work or their condition.

Assumed ratings are based on the property’s age and type. They are used for features the assessor could not inspect.

| Feature | Description                                        | Rating    |
|---------|----------------------------------------------------|-----------|
| Wall    | Granite or whin, as built, no insulation (assumed) | Poor      |
| Wall    | Cavity wall, as built, no insulation (assumed)     | Poor      |
| Roof    | Pitched, 270 mm loft insulation                    | Very good |
| Roof    | Pitched, insulated (assumed)                       | Average   |

| Feature              | Description                                | Rating    |
|----------------------|--------------------------------------------|-----------|
| Roof                 | Roof room(s), limited insulation (assumed) | Average   |
| Window               | Some double glazing                        | Very poor |
| Main heating         | Boiler and radiators, mains gas            | Good      |
| Main heating control | Room thermostat only                       | Poor      |
| Hot water            | From main system, no cylinder thermostat   | Average   |
| Lighting             | Below average lighting efficiency          | Average   |
| Floor                | Solid, no insulation (assumed)             | N/A       |
| Air tightness        | (not tested)                               | N/A       |
| Secondary heating    | Room heaters, mains gas                    | N/A       |

## Primary energy use

The primary energy use for this property per year is 323 kilowatt hours per square metre (kWh/m<sup>2</sup>).

► [About primary energy use](#)

## Additional information

Additional information about this property:

- Cavity fill is recommended
- Stone walls present, not insulated

## Smart meters

This property had **smart meters for gas and electricity** when it was assessed.

Smart meters help you understand your energy use and how you could save money. They may help you access better energy deals.

[Find out about using your smart meter \(https://www.smartenergygb.org/using-your-smart-meter\)](https://www.smartenergygb.org/using-your-smart-meter)

## How this affects your energy bills

An average household would need to spend **£3,770 per year on heating, hot water and lighting** in this property. These costs usually make up the majority of your energy bills.

You could **save £1,393 per year** if you complete the suggested steps for improving this property's energy rating.

This is **based on average costs in 2025** when this EPC was created. People living at the property may use different amounts of energy for heating, hot water and lighting.

---

## Heating this property

Estimated energy needed in this property is:

- 30,592 kWh per year for heating
- 3,612 kWh per year for hot water

## Impact on the environment

This property’s environmental impact rating is F. It has the potential to be D.

Properties get a rating from A (best) to G (worst) on how much carbon dioxide (CO2) they produce each year.

### Carbon emissions

|                                      |                    |
|--------------------------------------|--------------------|
| An average household produces        | 6 tonnes of CO2    |
| This property produces               | 13.0 tonnes of CO2 |
| This property’s potential production | 7.4 tonnes of CO2  |

You could improve this property’s CO2 emissions by making the suggested changes. This will help to protect the environment.

These ratings are based on assumptions about average occupancy and energy use. People living at the property may use different amounts of energy.

# Steps you could take to save energy

► [Do I need to follow these steps in order?](#)

## Step 1: Cavity wall insulation

|                           |               |
|---------------------------|---------------|
| Typical installation cost | £900 - £1,500 |
|---------------------------|---------------|

|                       |      |
|-----------------------|------|
| Typical yearly saving | £162 |
|-----------------------|------|

|                                          |      |
|------------------------------------------|------|
| Potential rating after completing step 1 | 48 E |
|------------------------------------------|------|

## Step 2: Internal or external wall insulation

|                           |                  |
|---------------------------|------------------|
| Typical installation cost | £7,500 - £11,000 |
|---------------------------|------------------|

|                       |      |
|-----------------------|------|
| Typical yearly saving | £316 |
|-----------------------|------|

|                                                 |      |
|-------------------------------------------------|------|
| Potential rating after completing steps 1 and 2 | 52 E |
|-------------------------------------------------|------|

## Step 3: Draught proofing

|                           |             |
|---------------------------|-------------|
| Typical installation cost | £150 - £250 |
|---------------------------|-------------|

|                       |     |
|-----------------------|-----|
| Typical yearly saving | £94 |
|-----------------------|-----|

|                                                |      |
|------------------------------------------------|------|
| Potential rating after completing steps 1 to 3 | 54 E |
|------------------------------------------------|------|

## Step 4: Hot water cylinder thermostat

|                           |             |
|---------------------------|-------------|
| Typical installation cost | £130 - £180 |
|---------------------------|-------------|

|                       |      |
|-----------------------|------|
| Typical yearly saving | £165 |
|-----------------------|------|

|                                                |      |
|------------------------------------------------|------|
| Potential rating after completing steps 1 to 4 | 56 D |
|------------------------------------------------|------|

## Step 5: Heating controls (programmer and TRVs)

|                           |             |
|---------------------------|-------------|
| Typical installation cost | £220 - £250 |
|---------------------------|-------------|

|                       |      |
|-----------------------|------|
| Typical yearly saving | £167 |
|-----------------------|------|

|                                                |
|------------------------------------------------|
| Potential rating after completing steps 1 to 5 |
|------------------------------------------------|

|      |
|------|
| 59 D |
|------|

## Step 6: Replace boiler with new condensing boiler

|                           |                 |
|---------------------------|-----------------|
| Typical installation cost | £2,200 - £3,500 |
|---------------------------|-----------------|

|                       |      |
|-----------------------|------|
| Typical yearly saving | £319 |
|-----------------------|------|

|                                                |
|------------------------------------------------|
| Potential rating after completing steps 1 to 6 |
|------------------------------------------------|

|      |
|------|
| 63 D |
|------|

## Step 7: Double glazed windows

Replace single glazed windows with low-E double glazed windows

|                           |                 |
|---------------------------|-----------------|
| Typical installation cost | £4,500 - £6,000 |
|---------------------------|-----------------|

|                       |      |
|-----------------------|------|
| Typical yearly saving | £171 |
|-----------------------|------|

|                                                |
|------------------------------------------------|
| Potential rating after completing steps 1 to 7 |
|------------------------------------------------|

|      |
|------|
| 65 D |
|------|

## Step 8: Solar photovoltaic panels, 2.5 kWp

|                           |                  |
|---------------------------|------------------|
| Typical installation cost | £8,000 - £10,000 |
|---------------------------|------------------|

|                       |      |
|-----------------------|------|
| Typical yearly saving | £276 |
|-----------------------|------|

|                                                |
|------------------------------------------------|
| Potential rating after completing steps 1 to 8 |
|------------------------------------------------|

|      |
|------|
| 68 D |
|------|

## Who to contact about this certificate

### Contacting the assessor

If you're unhappy about your property's energy assessment or certificate, you can complain to the assessor who created it.

|                        |                                                            |
|------------------------|------------------------------------------------------------|
| <b>Assessor's name</b> | Amber Kitching                                             |
| <b>Telephone</b>       | 01189770690                                                |
| <b>Email</b>           | <a href="mailto:epc@nichecom.co.uk">epc@nichecom.co.uk</a> |

### Contacting the accreditation scheme

If you're still unhappy after contacting the assessor, you should contact the assessor's accreditation scheme.

|                             |                                                                                    |
|-----------------------------|------------------------------------------------------------------------------------|
| <b>Accreditation scheme</b> | Elmhurst Energy Systems Ltd                                                        |
| <b>Assessor's ID</b>        | EES/027534                                                                         |
| <b>Telephone</b>            | 01455 883 250                                                                      |
